ACTIVE ICE® 3.0

Cold Therapy System

ACTIVE ICE® 3.0

Cold Therapy System

Drug-Free Pain Relief!

PATENT PENDING ELECTRONIC PROGRAMMABLE TIMER

A critical safety feature! Our programmable timer allows the unit to be set specifically per your health care professional's recommendation. Examples include (but are not limited to!) setting our system to cycle throughout the night with 20 minutes on and then 40 minutes off, or on for just 30 minutes and then shut off.

"A timer is a very important factor for healing. I am a nurse and we see many patients who have self-inflicted nerve damage due to constant icing of an extremity. This has been a lifesaver."

– Linda, R.N. in CO

LARGEST COOLING RESERVOIRS

Our standard nine (9) quart and fifteen (15) quart upgrade are the largest cooling reservoirs available on the market. Larger reservoirs hold more ice and allow for more time between adding ice. Most competitive systems do not tell you the reservoir size because they are small (often around 4 quarts). With twice the reservoir size and twice the ice, Active Ice® will get you through the night!

CONVENIENT ON AND OFF

On/off switch eliminates the danger of fumbling through the dark to unplug system.

WHISPER QUIET

High-efficiency pump quietly circulates water.

Active Ice® Extremity Cooling System

According to studies¹, using a cold therapy system on patient extremities during chemotherapy can reduce the nail and skin toxicity associated with docetaxel and improves the quality of life of the patient.

"We have 3 sessions of chemotherapy left out of 12. No signs of any peripheral neuropathy at all so very successful. My wife's oncologist was very impressed! Thanks again for everything. The system worked great. Every woman getting Taxol should use this." – Dr. Ken in Chicago, IL
